

DJI Maintenance Service

Deep Clean

Environments with sand, dust, and humidity are unavoidable when using your aircraft. Some parts will become worn, and metal parts may even corrode more quickly. We will clean your aircraft carefully to reduce the impact of sand and dust on the aircraft, and we will apply rust-preventive oil onto the aircraft's key metal parts to reduce the impact of humid weather on the aircraft.

Parts Inspection

No.	Type
1	App Self-Check Inspection
2	Visual Inspection
3	Propulsion System Inspection
