

DJI Terra Known Issue List

Release Date: 2022.11.10

DJI Terra Version: V3.6.0

No.	Issue Description	Impact and Workaround
1	When 3D reconstruction is split into small blocks, hole may exist in the model output.	It will be fixed in later versions
2	Aerial triangulation color is abnormal after real-time 2D reconstruction completes.	It will be fixed in later versions
3	After modifying identified results in Agricultural Application, irregular edges are displayed when users zoom in on the corrected spots.	It will be fixed in later versions
4	When copying a reconstruction mission after exporting it and importing it again, users cannot view photos of the copied mission.	It will be fixed in later versions

DJI Terra Known Issue List

5	When 3D reconstruction reaches 100%, an error message (4008) occasionally displays.	If non-default output format is selected, users can view the existing output via third-party tools. It will be fixed in later versions
6	When using 8K resolution to view models, the software gets stuck.	It will be fixed in later versions
7	After 3D water surface reconstruction completes, a hollow may exist and become smaller or bigger when users zoom the reconstruction model.	It will be fixed in later versions
