Brief Introduction

Maps Made Easy was the first cloud-based photogrammetry map processing platform available (since 2014) and is still going strong. Its pay-as-you-go pricing allows you to create high-resolution maps and 3D models from aerial imagery without the need for any high-priced long-term contracts. It is optimized for use with DJI cameras and offers easy sharing tools to deliver quality results to your teams and customers. Maps Made Easy also provides detailed mission plan and log file display for industry leading data collection using Map Pilot Pro. Various subscription levels are also offered to provide the lowest cost processing available.
