

Invitation Letter to the RoboMaster 2022 University Series

Dear RoboMasters,

Pre-registration begins for the RoboMaster 2022 University Series. We would like to invite your school to apply for the competition.

The RoboMaster Competition has been listed in the national academic competition directories for colleges and universities released by the China Association of Higher Education in 2019.

The RoboMaster University Series (RMU) is a platform for robotic competitions and academic exchange founded by Da-Jiang Innovations (DJI) and specially designed for global technology enthusiasts. Since its establishment in 2013, RoboMaster has been committed to its mission – "empowering young learners to transform their world with the power of engineering and technology", in order to attract engineering talents with interdisciplinary abilities and showcase the possibilities of technological innovation to audiences around the globe.

It requires participants to go beyond their textbooks to form a robotics team, develop a diverse fleet of robots and participate in team battles. Through the intense competition, students gain invaluable industrial practice and strategic planning skills. This helps to combine their book knowledge with practice in this field, and enables the most advanced and intelligent robots to be built.

The RoboMaster 2022 University Series includes the RoboMaster University Championship, RoboMaster University League, RoboMaster University Technical Challenge, and RoboMaster University AI Challenge. Please refer to the official website for more information. Your school can choose competitions according to your particular needs or situation.

The RoboMaster Organizing Committee will continue to promote the development and innovative application of robotics and artificial intelligence technology and build a more professional and participatory robotics platform. We will promote talent training and enhance the social influence of RoboMaster across the world.

We look forward to receiving your application!
